UX designer and software engineer with three years of experience building device-connected software, now focused on interaction design through my M.Sc. at KTH. I'm interested in making complex systems easy for people to use, from user research through prototyping and testing.

EDUCATION

M.Sc. Interactive Media and Technology, *KTH Royal Institute of Technology, Stockholm* Aug 2025 – Present

B.Tech (Hons) Computer Science and Engineering, *APJ Abdul Kalam Technological University, India* Aug 2018 – Aug 2022

- GPA: 9.16/10

EXPERIENCE

UI/UX Designer Intern, *NovaBirth, Stockholm* Feb 2026 – July 2026

- Designed a prototype for a non-invasive, device-based system to assess cervical dilation during pregnancy using AI
- Mapped task flows and information architecture across two integrated systems, explicitly documenting the interface boundary and hand-off mechanism between them
- Identified and designed recovery paths for multiple failure modes (unrecognized input, low-confidence data, UI conflicts) through iterative self-review

UX Designer, *Scribe (Remote)* Oct 2025 – Nov 2025

- Designed a guess-based interaction to support active recall in a language-learning keyboard
- Identified and resolved an accessibility/contrast issue affecting UI legibility across dynamic interface states, replacing an ambiguous visual indicator with a robust, consistent one
- Made interaction design decisions (input method, feedback mechanism) grounded in cognitive science principles (retrieval practice/testing effect), evaluating trade-offs between usability and technical feasibility

Software Developer, *SOTI, India* Aug 2022 – Aug 2025

- Built real-time device status updates and remote actions using SignalR, letting administrators monitor and control connected devices from the console
- Migrated the application from .NET Framework to .NET Core, cutting API response time by 50%
- Reduced the MobiControl installer size from 1.5GB to 800MB

PROJECTS

The Orb KTH, 2025

- Applied the Double Diamond process in a four-member team to develop a meaningful ritual addressing the needs of corporate remote workers
- Conducted semi-structured interviews and academic literature reviews to identify key pain points, using Affinity Mapping to synthesize data into a primary persona and actionable "How Might We" statements
- Developed and tested a range of prototypes, from low-fidelity paper models to high-fidelity Arduino setups. Refined the interface based on testing feedback to optimize light transitions and emotional resonance

SKILLS

UI/UX: User Research, Journey Mapping, Interaction Design, Wireframing & Prototyping, Usability Testing

Tools: Figma, Miro, Zapier, Arduino, Git

Programming: HTML, CSS, JavaScript, React, C#, Python

ACHIEVEMENTS

- AnitaB.org India Advancing Inclusion Scholar (2024)
- Twilio SIGNAL Scholar (2022)
- Grace Hopper Celebration Scholar (2021)
- Harvard Project for Asian and International Relations Delegate (2021)
